One-inch of rainfall means 100 tons of water on every acre.

To find the contents of a pile of cordwood, multiply the length, width and height together and divide the product by 128. This will give you the number of cords.

A gallon of water equals 277.274 cubic inches.

Water expands 1/11th of its bulk in freezing.

Doubling the diameter of a pipe or cylindrical vessel increases its capacity four times.

Double-riveting is from 16 to 20 percent stronger than single-rivet-ing.

CIRCLES AND GLOBES

To find the circumference of a circle, multiply the diameter by 3.1416.

To find the diameter of a circle, multiply the circumference by .31831.

To find the area of a circle, multiply the square of the diameter by .7854.

To find the surface of a globe, multiply the square of the diameter by 3.1416.

To find the solidity of a globe, multiply the cube of the diameter by .5236.

TO FIND THE CONTENTS OF BARRELS AND CASKS IN GALLONS

Rule—Multiply the square of the mean diameter in inches by the depth in inches and the product by .0034.

TO FIND THE BUSHELS OF GRAIN OR SHELLED CORN IN A BIN OR WAGON BOX

Multiply the number of cubic feet by .8 or divide by 1¼.

TO FIND NUMBER OF BOARD FEET IN A LOG

Subtract 4 inches from the diameter and square the remainder. The result will be the number of board feet in a 16-foot log. Add ½ for 18-foot logs, ¼ for 20-foot logs. Subtract ¼ for 14-foot logs, ¼ for 12-foot logs.

TO FIND THE NUMBER OF TONS OF HAY IN A MOW

Multiply the length by the width by the height (all in feet) and divide by 400 to 500, depending on the kind of hay and how long it has been in the mow.

TO FIND THE NUMBER OF TONS OF HAY IN A STACK

Multiply the overthrow (the distance from the ground on one side over the top of the stack to the ground on the other side) by the length, by the width (all in feet); multiply by 3; divide by 10 and then divide by 400 to 600, depending upon the length of time the hay has been in the stack.

CISTERN CAPACITY

A cistern ten feet in diameter and nine feet deep will hold 168 barrels.

A cistern five feet in diameter will hold five and two-thirds barrels for every foot in depth.

A cistern six feet in diameter will hold six and three-fourths barrels for every foot in depth.

A cistern eight feet in diameter will hold nearly twelve barrels for every foot in depth.

A cistern nine feet in diameter will hold fifteen and one-half barrels for every foot in depth.

A cistern ten feet in diameter will hold eighteen and three-eighths barrels for every foot in depth.

WEIGHTS AND VOLUMES OF WATER

One cubic inch of water weighs .03617 pounds. One cubic foot weighs 62.5 pounds.

One cubic foot equals 6.25 gallons. One pint (liquid) weighs 1.25 pounds. One gallon weighs 10 pounds. One gallon equals 277.274 cubic inches. One liquid quart equals 69.31 cubic inches.

Double the rafters and multiply by length of building. Multiply this by 9 if exposed 4 inches, by 8 if exposed 4½ inches, and by 7 1/5 if exposed 5 inches to the weather.

SHINGLES

Laid 4 inches to the weather, 1,000 will cover 100 sq. feet.

LUMBER MEASURE

To find the contents of boards, in square feet. Rule—Multiply the length (in feet) by the width (in inches) and divide the product by 12.

Example—Find the contents of a 16-foot board, 9 inches wide. 9x12 equals 144 divided by 12 equals 12 square feet. Ans.

To find the contents of scantlings, joists, etc., in square feet. Rule—Multiply the length, thickness and width together, and divide the product by 12.

CHIMNEY MORTAR

A very good mortar for setting a brick chimney is made with cement, sand and lime. Use one part Portland cement to three parts of screened sand; and to every sack of cement used add 10 pounds of hydrated lime. Mix the lime, cement and sand thoroughly in the dry state and do not wet more of this mixture at one time than can be used in half an hour.

AMOUNT OF PAINT REQUIRED FOR A GIVEN SURFACE

It is impossible to give a rule that will apply in all cases, as the amount varies with the kind and thickness of the paint, the kind of wood or other material to which it is applied, the age of the surface, etc. The following is an approximate rule: Divide the number of square feet of surface by 200. The result will be the number of gallons of liquid paint required to give two coats; or divide by 1 and the result will be the number of pounds of pure ground white lead required to give three coats.
